## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the screw connection must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ali et al.

Ali discloses a power component assembly 100 for mechatronic integration of power components comprising: a circuit board 130, a power component 110 arranged on the circuit board; at least one cooling element 160 for dissipating heat generated by the power component, and a pressure-mounting frame 140 connected with the at least one cooling element 160 and holding the power component in heat-conductive contact with the cooling element 160; the pressure-mounting frame 140 and the at least one cooling element 160 are in locking engagement with each other; the pressure-mounting frame 140 and the at least one cooling element 160 are connected with each other by a screw connection 142, 162. Ali discloses the claimed invention except a plurality of components and cooling elements and the cooling elements being galvanically isolated from each other. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have more than one component and more than one cooling elements, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8. It would have been obvious to one having ordinary skill in the art at the

time the invention was made to use galvanic isolation between elements as needed since it is well known and widely used method of isolation of metallic parts and it has not been considered demonstrated as critical therefore obvious.

***Allowable Subject Matter***

4. Claims 5-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to disclose the support strip being mechanically connected with the circuit board.
